

Cord Covers

Exposed cords on the floor, stretched across walkways, and tangled near work spaces can catch a person's foot and lead to a trip and fall incident.

How do you prevent a trip and fall incident? **Use a Cord Cover!** Not only does it prevent people from tripping over the cords, it protects the cords/hoses from becoming damaged.

Make Sure You Do the Following:

- Use cord covers to maintain a well organized work area
- Use cord covers will help prevent ourselves & our coworkers from tripping
- Promptly tidy up cords/hoses
- Put cord covers away when you are finished using them

Proper housekeeping while keeping clear access and egress routes will decrease the chance of our people getting hurt. As a team, let's make a conscious effort to work safely, one day at a time, no matter what type of work is being done. Managing our cords/hoses put us one step safely in the right direction.
